

APPENDIX J - POST THRESHOLD INTERVALS FOR STRUCTURES AND ZONAL TASKS

A. GENERAL

Some structures and zonal MPD items have been escalated by the Industry Steering Committee beyond the initial repeat interval considered at the time of the initial aircraft certification. The intervals listed in Appendix J correspond to the original task intervals used in determining the DTR which satisfies Title 14 CFR § 25.571. As a result, prior to or at the threshold specified in Section 9, Table 9-2, the items listed in Appendix J are required to be returned to the interval in that appendix, rather than what is listed in Sections 2 and 3 of this MPD.
